Summary

Full-stack software engineer with five years of experience building customer-facing products and enterprise security software. Specializes in delivering full-stack features with a frontend focus, including React applications, real-time user experiences, Elixir APIs, automated testing, and design systems. Delivered features supporting 1,000+ live nodes and created a design system adopted by 40+ engineers.

Work Experience

Full-Stack Software Engineer **Mimic** **Apr 2024 – Aug 2026**
Management Plane · Design Systems · QA Palo Alto, CA (Remote)

- Owned full-stack delivery of customer-facing management-plane features across React, Elixir, OpenAPI, and automated testing, supporting Mimic's growth from zero to 1,000+ live nodes across four major customers.
- Built configuration and revision workflows that defined each node's protections, including create, edit, apply, compare, preview, and rollback flows; added immediate dashboard feedback for schema errors, malformed JSON, and invalid ACLs.
- Implemented real-time updates across dashboard resources using sockets and Phoenix Channels, and extended the interface from desktop-only use to complete phone, tablet, laptop, and desktop support for incident response.
- Reduced total CI time by approximately 50% by replacing a 12+ minute Cypress-heavy frontend test suite with Vitest and Playwright, bringing frontend CI below five minutes and local runs to roughly two minutes.
- Rebuilt roughly 240 API tests from Bash in typed TypeScript and Bun; moved them from manual QA to PR-blocking and scheduled CI with Slack reporting, enabling additional engineers to contribute tests.
- Created a company-wide design system with 50+ primitives and 15+ composite components, adopted by every UI-building team in a 40+ engineer organization.
- Owned the public Webflow website, including SEO, AEO, analytics, forms, and content structure; increased website traffic by more than 10x and generated inbound leads.

Contract Software Engineer **Self-employed** **Jul 2026 – Present**
Client: DrainPro Drain Cleaning and Pump Services Saratoga Springs, NY

- Designed, developed, and deployed a 12-page company website, owning information architecture, UX, implementation, and customer inquiry flows.
- Achieved perfect 100 Lighthouse scores for Performance, Best Practices, and SEO on mobile and desktop, with a 1.4-second LCP and zero cumulative layout shift.
- Implemented technical SEO and AEO using semantic HTML, metadata, JSON-LD structured data, XML sitemaps, robots.txt, and support for major AI crawlers.

Teaching Fellow **Fullstack Academy** **Sep 2021 – Apr 2024**
Curriculum · Mentorship New York, NY (Remote)

- Mentored 60+ students per cohort and 300+ overall in data structures, algorithms, software architecture, debugging, and clean code, with a 100% graduation rate among directly assigned students.
- Delivered lectures on React, Redux, React hooks, data structures, algorithms, PostgreSQL, and Prisma, and contributed to curriculum revisions.
- Served as technical project manager for student teams, leading code reviews and Agile ceremonies throughout their software projects.

Education and Certifications

Coding Bootcamp, Full-Stack Software Engineering, Fullstack Academy, New York, NY (Remote)
Coursework in Chemistry and Physics, SUNY Potsdam, Potsdam, NY

Technical Skills

Frontend:	TypeScript, JavaScript, React, Next.js, Redux, Zustand, React Query, HTML/CSS, accessibility, responsive design
Testing:	Vitest, Playwright, Cypress, API and regression test automation, CI-integrated suites
Backend/API:	Elixir, Node.js, Python, PostgreSQL, SQL, Prisma, OpenAPI, WebSockets, Phoenix Channels
Tools & Platforms:	Bun, Tailwind CSS, DaisyUI, Windmill, GitHub Actions, Netlify, Webflow, Git, Docker, GCP
