

Summary

Product-minded full-stack engineer with five years of experience building interfaces, developer tooling, and test infrastructure for complex systems. At Mimic, owned security workflows across React, Elixir, OpenAPI, and automated testing while improving how engineers inspected failures and caught regressions. Strongest in detail-oriented frontend work, fast iteration, and turning ambiguous requirements into reliable, understandable tools.

Work Experience

Full-Stack Software Engineer Management Plane · Product Engineering · Quality	Mimic	Apr 2024 – Aug 2026 Palo Alto, CA (Remote)
- Vertically owned customer-facing management-plane features across React, Elixir, OpenAPI, and automated testing as Mimic scaled from zero to 1,000+ live nodes protecting customer systems such as Active Directory across four major customers. - Built configuration and revision workflows for creating, editing, applying, comparing, previewing, and rolling back node protections; added immediate feedback for schema errors, malformed JSON, and invalid access-control lists. - Owned real-time updates with sockets and Phoenix Channels across every dashboard resource, then took the interface from no responsive support to complete phone, tablet, laptop, and desktop coverage for incident response. - Reduced total CI time by approximately 50% by replacing a 12+ minute Cypress-heavy frontend suite with Vitest and Playwright, bringing frontend CI below five minutes and local runs to roughly two minutes. - Modernized roughly 240 API tests from Bash to typed TypeScript and Bun; moved them from manual QA execution to PR-blocking and daily scheduled CI with descriptive failure reporting, enabling at least two additional engineers to contribute tests. - Created a company-wide design system with 50+ primitives and 15+ composite components, adopted by every UI-building team in a 40+ engineer organization.		
Contract Software Engineer Client: DrainPro Drain Cleaning and Pump Services	Self-employed	Jul 2026 – Present Saratoga Springs, NY
- Delivered a 12-page company website end to end, from information architecture and UX through implementation and deployment, covering services, service area, and customer inquiry flows. - Achieved 100 Lighthouse scores for Performance, Best Practices, and SEO across mobile and desktop, with 1.4s largest contentful paint and zero cumulative layout shift.		
Teaching Fellow Curriculum · Mentorship	Fullstack Academy	Sep 2021 – Apr 2024 New York, NY (Remote)
- Mentored 60+ students per cohort and 300+ overall in data structures, algorithms, architecture, debugging, and clean code; 100% of students under direct mentorship graduated. - Led lectures on data structures, algorithms, React hooks, PostgreSQL, and Prisma; reviewed code and guided student teams through architecture and delivery decisions.		

Education and Certifications

Coding Bootcamp, Full-Stack Software Engineering, Fullstack Academy, New York, NY (Remote)
Coursework in Chemistry and Physics, SUNY Potsdam, Potsdam, NY

Technical Skills

Frontend:	TypeScript, JavaScript, React, Next.js, Zustand, React Query, Tailwind CSS, HTML/CSS, accessibility
Testing:	Vitest, Playwright, Cypress, API and regression automation, CI-integrated suites
Backend/API:	Elixir, Node.js, Python, PostgreSQL, SQL, Prisma, OpenAPI, WebSockets, Phoenix Channels
Tools:	Bun, GitHub Actions, Windmill, Docker, GCP, Netlify, Git
